EXCHANGE OF POWER SUPPLY

As our supplier has phased out our current power supply, we are changing to a new 12V DC Power supply, primarily used in our POS towers.

Old item number: **21501**

New item number: **104-345**

This exchange comes with a small challenge: The polarity (+ -) on our old power supply connection is opposite to market standard. This will now be changed to match market standard but will also mean that a new power supply cannot directly be used on an existing tower in trade. In cases where there is a need for a new power supply for an existing tower, our "Polarity converter" (**104-605**) can fix this.

The agreed exchange date in production will be **WEEK 30**, which means that all towers produced from this week and going forward, will all be according to this new setup.

To help identify for which setup the tower is produced, we have introduced a color change on our wire label from **white** to **black** (see example below). The polarity converter would be needed for towers with white label.

NEW Wire label

OLD Wire label

Thank you for your understanding!
